

# KYLA GREGORY

• fullstack javascript developer •

## SKILLS

JavaScript

ReactJS

Redux

Google Firestore  
(NoSQL)

HTML5

Postgres (SQL)

NodeJS

ExpressJS

CSS3

Git/GitHub (version  
control)

REST APIs

Material-UI, SASS, CSS3

## ABOUT ME

Self-motivated JavaScript developer specializing in React, with a passion for creating single-page applications that provide accessible, approachable user interfaces.

Self-taught, self-aware, and motivated to excel and succeed in expanding my programming skills. Goal-oriented with a desire for constant self improvement.

## PROJECTS

### BOOK GENERATOR

A React project utilizing the NY Times Books API. Users must sign/log in and will then have access to a random generator that allows the user to purchase the book on Amazon or favorite the book which will add it to the user's data.

- React
- React hooks
- Redux
- Google Firestore (NoSQL)

### SANDBOX APP

This is a sandbox I created to add new technical skills as I learn them. The app contains a simple to-do list but it utilizes an Express and NodeJS server by making http requests, where the server queries the data stored in a postgres database.

- React
- PostgreSQL
- Express and NodeJS
- pgAdmin
- Soon to include TypeScript
